SUBJECT: Tysons Dump Site

DATE:

FROM: Tim Travers (3HW12) *TH*

SEP 9 1986

TO: Addressees

I have organized a meeting tomorrow (9/10/86) at 9:30am in Tom Voltaggio's office to discuss a common strategy in responding to Ciba-Geigy's recent findings, their proposed studies and request, and their overall impact on remediation of the Tysons Dump site.

As most of you are aware, Ciba-Geigy made a presentation yesterday (9/8/86) concerning their preliminary findings in the Tysons "OffSite" areas, specifically concentrating on the Deep/Bedrock Aquifer and the D-NAPLs (Dense-Non Aqueous Phase Liquids).

As part of this presentation, Rolf Bernegger, V.P. of Ciba-Geigy presented Ciba's recent "vapor stripping" tests performed on some of the contaminated lagoon area soils. As a result of the vapor stripping tests, Ciba requested that a meeting be set-up with EPA within a month to:

- 1- discuss the results of this technology on the lagoon soils, and
- 2- to request EPA approval for Ciba to perform onsite pilot plant studies in the near future.

Ciba- Geigy was told that we (EPA) would get back to them with an answer to their request.
